

10 μm

A fluorescence micrograph showing numerous small, cyan-colored, rod-shaped bacteria distributed across a dark gray background. The bacteria appear to be randomly oriented and widely spaced. In the bottom right corner, there is a larger, more complex cluster of bacteria, some of which are oriented vertically, suggesting they might be attached to a surface or each other. A black rectangular scale bar is located in the bottom right corner, with the text "10 μm" written below it.
